DEPLOYMENTS

Rise of the Containers Workshop

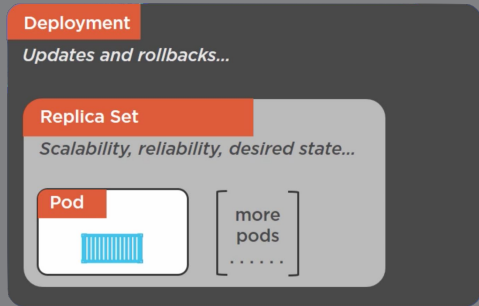

BUT...Again ??? Yeahh..you get it..

*Replica Sets are good but we want
something better.*

What is missing in RS ?

- Updates with zero downtime (Rolling Updates)
- Rollbacks

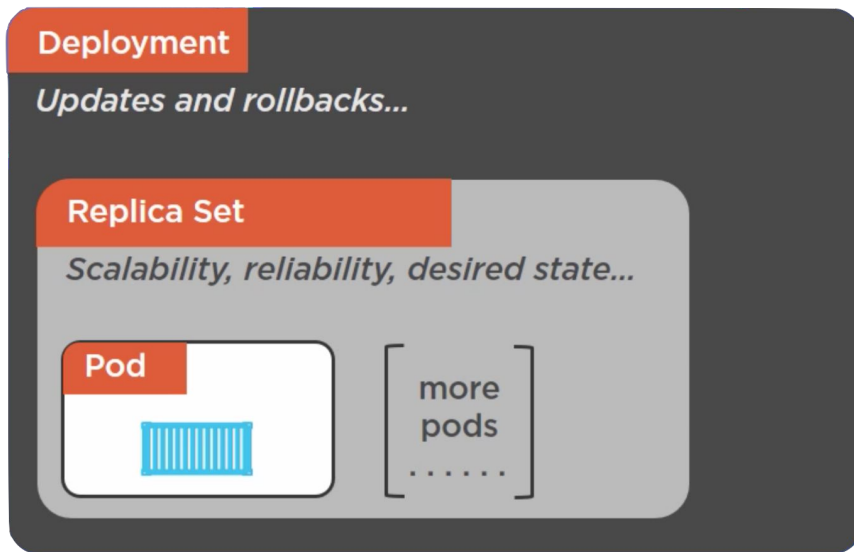

Deployments

A Deployment is a higher-level concept that manages ReplicaSets and provides declarative updates to pods along with a lot of other useful features.

Deployments

- Abstraction on top of Replica Sets.
- Provide updates and rollbacks for Replica Sets

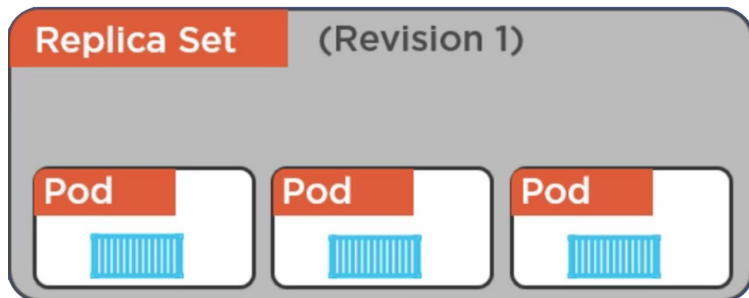

Current State: Revision 1

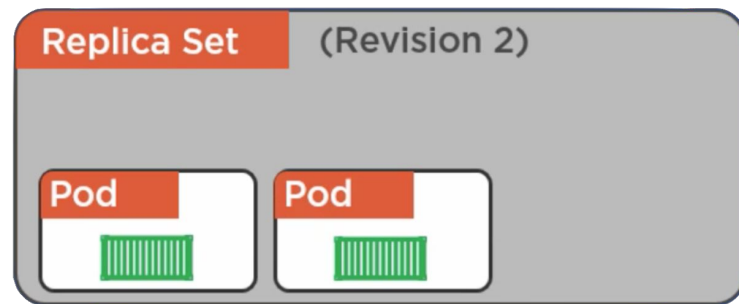

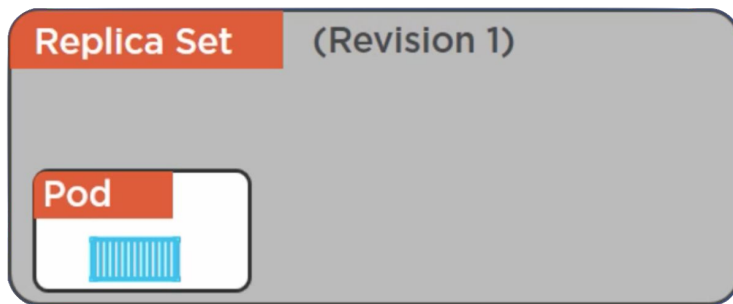

```
apiVersion:  
extensions/v1beta1  
kind: Deployment  
metadata:  
  name: hello-deploy  
spec:  
  replicas: 10  
  ...
```

Deployed
to Cluster

Rolling Updates: Revision 2

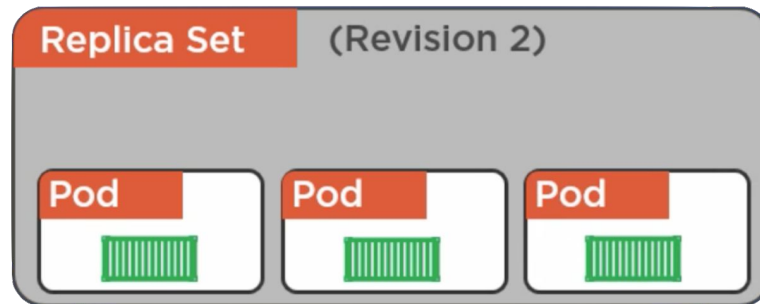

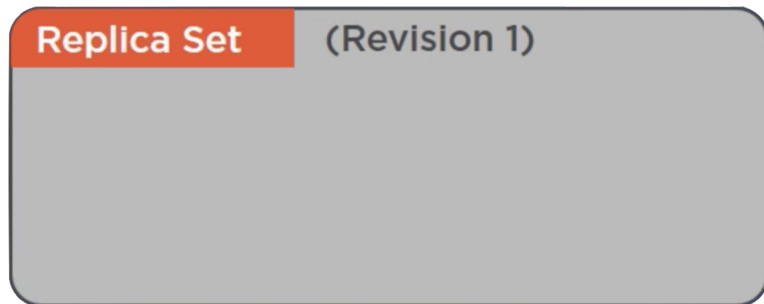

Rolling Updates: Revision 2 Complete

```
apiVersion:  
extensions/v1beta1  
kind: Deployment  
metadata:  
  name: hello-deploy  
spec:  
  replicas: 10  
  ...
```

Deployed to
Cluster

Rollbacks to Revision 1

Deployment Demo

HANDS-ON

1. Create Deployment Object for the Metadata Service 1.0
2. Create a NodePort Service for it
3. Rollout new image version of MetaData Service 2.0
4. Access the application via browser.

THANK YOU
